УДК 518.9, 517.9, 681.3.07

Contributions to game theory and management. Vol. IV. Collected papers presented on the Fourth International Conference Game Theory and Management / Editors Leon A. Petrosyan, Nikolay A. Zenkevich. – SPb.: Graduate School of Management SPbU, 2011. – 514 p.

The collection contains papers accepted for the Fourth International Conference Game Theory and Management (June 28–30, 2010, St. Petersburg University, St. Petersburg, Russia). The presented papers belong to the field of game theory and its applications to management.

The volume may be recommended for researches and post-graduate students of management, economic and applied mathematics departments.

Успехи теории игр и менеджмента. Вып. 4. Сб. статей четвертой международной конференции по теории игр и менеджменту / Под ред. Л.А. Петросяна, Н.А. Зенкевича. – СПб.: Высшая школа менеджмента СПбГУ, 2011. – 514 с.

Сборник статей содержит работы участников четвертой международной конференции «Теория игр и менеджмент» (28–30 июня 2010 года, Высшая школа менеджмента, Санкт-Петербургский государственный университет, Санкт-Петербург, Россия). Представленные статьи относятся к теории игр и ее приложениям в менеджменте.

Издание представляет интерес для научных работников, аспирантов и студентов старших курсов университетов, специализирующихся по менеджменту, экономике и прикладной математике.

Contents

Preface	6
Graph Searching Games with a Radius of Capture	8
<i>Tatiana V. Abramovskaya, Nikolai N. Petrov</i>	
Non-Cooperative Games with Chained Confirmed Proposals	19
<i>G. Attanasi, A. García-Gallego, N. Georgantzís, A. Montesano</i>	
The Π-strategy: Analogies and Applications	33
<i>A. A. Azamov, B. T. Samatov</i>	
About Some Non-Stationary Problems of Group Pursuit with the Simple Matrix	47
<i>Alexander Bannikov, Nikolay Petrov</i>	
Mathematical Model of Diffusion in Social Networks	63
<i>Olga Bogdanova, Elena Parilina</i>	
Product Diversity in a Vertical Distribution Channel under Monopolistic Competition	71
<i>Igor Bykadorov, Sergey Kokovin, Evgeny Zhelobodko</i>	
Strong Strategic Support of Cooperative Solutions in Differential Games	105
<i>Sergey Chistyakov, Leon Petrosyan</i>	
Strategic Bargaining and Full Efficiency	112
<i>Xianhua Dai, Hong Li[†], Xing Tong</i>	
Socially Acceptable Values for Cooperative TU Games	117
<i>Theo Driessen, Tadeusz Radzik</i>	
Auctioning Big Facilities under Financial Constraints	132
<i>María Ángeles de Frutos, María Paz Espinosa</i>	
Numerical Study of a Linear Differential Game with Two Pursuers and One Evader	154
<i>Sergey S. Ganebny, Sergey S. Kumkov, Stéphane Le Ménéec, Valerii S. Patsko</i>	
The Dynamic Procedure of Information Flow Network	172
<i>Hongwei GAO, Zuoyi LIU, Yeming DAI</i>	
Game Theory Approach for Supply Chains Optimization	188
<i>Mansur G. Gasratov, Victor V. Zakharov</i>	
Stochastic Coalitional Games with Constant Matrix of Transition Probabilities	199
<i>Xeniya Grigorieva</i>	

Cash Flow Optimization in ATM Network Model	213
<i>Elena Gubar, Maria Zubareva, Julia Merzljakova</i>	
Stable Families of Coalitions for Network Resource Allocation Problems	223
<i>Vladimir Gurvich, Sergei Schreider</i>	
Signaling Managerial Objectives to Elicit Volunteer Effort	231
<i>Gert Huybrechts, Jurgen Willems, Marc Jegers, Jemima Bidee, Tim Vantilborgh, Roland Pepermans</i>	
Two Solution Concepts for TU Games with Cycle-Free Directed Cooperation Structures	241
<i>Anna Khmel'nitskaya, Dolf Talman</i>	
Tax Auditing Models with the Application of Theory of Search	266
<i>Suriya Sh. Kumacheva</i>	
Bargaining Powers, a Surface of Weights, and Implementation of the Nash Bargaining Solution	274
<i>Vladimir D. Matveenko</i>	
On Games with Constant Nash Sum	294
<i>Pierre von Mouche</i>	
Claim Problems with Coalition Demands	311
<i>Natalia I. Naumova</i>	
Games with Differently Directed Interests and Their Application to the Environmental Management	327
<i>Guennady A. Ougolnitsky</i>	
Memento Ludi: Information Retrieval from a Game-Theoretic Perspective	339
<i>George Parfionov, Romàn Zapatrin</i>	
The Fixed Point Method Versus the KKM Method	347
<i>Shie Park</i>	
Proportionality in NTU Games: on a Proportional Excess Invariant Solution	361
<i>Sergei L. Pechersky</i>	
On a Multistage Link Formation Game	368
<i>Leon Petrosyan, Artem Sedakov</i>	
Best Response Digraphs for Two Location Games on Graphs	378
<i>Erich Prisner</i>	
Uncertainty Aversion and Equilibrium in Extensive Games	389
<i>Jörn Rothe</i>	

Nash Equilibrium in Games with Ordered Outcomes	407
<i>Victor V. Rozen</i>	
Cooperative Optimality Concepts for Games with Preference Relations	421
<i>Tatiana F. Savina</i>	
A Fuzzy Cooperative Game Model for Configuration Management of Open Supply Networks	433
<i>Leonid B. Sheremetov, Alexander V. Smirnov</i>	
Modeling of Environmental Projects under Condition of a Random Time Horizon	447
<i>Ekaterina Shevkoplyas, Sergey Kostyunin</i>	
A Data Transmission Game in OFDM Wireless Networks Taking into Account Power Unit Cost	460
<i>Anton Toritsyn, Rimma Salakhieva, Andrey Garnaev</i>	
Strict Proportional Power and Fair Voting Rules in Committees	473
<i>František Turnovec</i>	
Subgame Consistent Solution for Random-Horizon Cooperative Dynamic Games	489
<i>David W.K. Yeung, Leon A. Petrosyan</i>	
Efficient CS-Values Based on Consensus and Shapley Values	502
<i>Alexandra B. Zinchenko, Polina P. Provotorova and George V. Mironenko</i>	

Preface

This edited volume contains a selection of papers that are an outgrowth of the Fourth International Conference on Game Theory and Management with a few additional contributed papers. These papers present an outlook of the current development of the theory of games and its applications to management and various domains, in particular, energy, the environment and economics.

The International Conference on Game Theory and Management, a three day conference, was held in St. Petersburg, Russia in June 28-30, 2010. It was the initiative of St. Petersburg University carried out by the Graduate School of Management SPbU and the Department of Applied Mathematics Control Processes SPbU in collaboration with The International Society of Dynamic Games (Russian Chapter). More than 100 participants from 25 countries had an opportunity to hear state-of-the-art presentations on a wide range of game-theoretic models, both theory and management applications.

Plenary lectures covered different areas of games and management applications. They had been delivered by Professor Alain Haurie, University of Geneva (Switzerland); Professor Arkady Kryazhimskiy International Institute for Applied Systems Analysis (Austria) and Steklov Mathematical Institute RAS (Russia; Professor Herve Moulin, Rice University (USA) and Professor Ralph Tyrrell Rockafellar, University of Washington (USA).

The importance of strategic behavior in the human and social world is increasingly recognized in theory and practice. As a result, game theory has emerged as a fundamental instrument in pure and applied research. The discipline of game theory studies decision making in an interactive environment. It draws on mathematics, statistics, operations research, engineering, biology, economics, political science and other subjects. In canonical form, a game obtains when an individual pursues an objective(s) in a situation in which other individuals concurrently pursue other (possibly conflicting, possibly overlapping) objectives and in the same time the objectives cannot be reached by individual actions of one decision maker. The problem is then to determine each individual's optimal decision, how these decisions interact to produce equilibria, and the properties of such outcomes. The foundations of game theory were laid more than sixty years ago by von Neumann and Morgenstern (1944).

Theoretical research and applications in games are proceeding apace, in areas ranging from aircraft and missile control to inventory management, market development, natural resources extraction, competition policy, negotiation techniques, macroeconomic and environmental planning, capital accumulation and investment.

In all these areas, game theory is perhaps the most sophisticated and fertile paradigm applied mathematics can offer to study and analyze decision making under real world conditions. The papers presented at this Fourth International Conference on Game Theory and Management certainly reflect both the maturity and the vitality of modern day game theory and management science in general, and of

dynamic games, in particular. The maturity can be seen from the sophistication of the theorems, proofs, methods and numerical algorithms contained in the most of the papers in these contributions. The vitality is manifested by the range of new ideas, new applications, the growing number of young researchers and the expanding world wide coverage of research centers and institutes from whence the contributions originated.

The contributions demonstrate that GTM2010 offers an interactive program on wide range of latest developments in game theory and management. It includes recent advances in topics with high future potential and exiting developments in classical fields.

We thank Anna Tur from the Faculty of Applied Mathematics (SPbU) for displaying extreme patience and typesetting the manuscript.

Editors, Leon A. Petrosyan and Nikolay A. Zenkevich
